Push-in
Switches & Pilot Lights

Smart design, simple wiring

SAVE ALL
eco

IDEC CORPORATION

S³ CONNECT

All thoughts focused on the same goal

Since the late 1970s, IDEC has continued to instill and pursue "Save and Safe", as part of our corporate DNA. Along with the rapid advancement in machine intelligence and demands for environmental resistance and high reliability in recent years, we need to face societal issues such as shortage in workforce.

To solve these issues, we have set as our goals "Safe, Simple & Smart=S³ (S cube)", aiming to provide society with products and services that will bring about greater innovation and lasting quality.

Safe

Products anyone can use with safety and assurance, from a company seeking to be number one in safety

Simple

Products appreciated by all our customers for their ease of connection regardless of experience

Smart

Products that make labor-saving and space-saving a reality

Useful NEW

We provide easy and user-friendly products with new technology.

First in the industry
Six different colors with a single LED

Previously, 5 different color LEDs were required but with the new illuminated unit, only a single LED is used.

Only the lens needs to be replaced to change the illumination color.

The new LED reduces maintenance time, makes stock control easier, and is enviromentally friendly.

| R
Red | G
Green | Y
Yellow | A
Amber | S
Blue | PW
Pure white | |

6 different color lenses

One LED
High visibility with new LED

Brighter and clearer compared to conventional LEDS

| | R
Red | A
Amber | Y
Yellow | G
Green | S
Blue | PW
Pure white |

Conventional LEDs

NEW LEDs
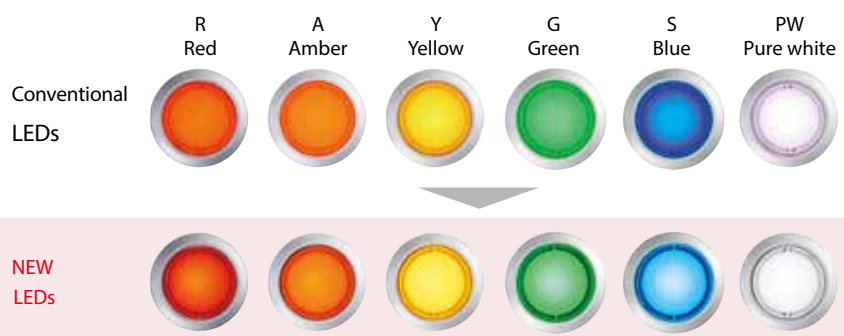

ISO3864-4
Safety color compliant

(Corresponding colors: R (Red), Y (Yellow), G (Green), PW (Pure white))

Safety colors are defined with ISO standards.

The bright and clears colors are suited for emergency situations

Push-in

Simple wiring for greater work efficiency

Ferrules and solid wires can be connected simply by push-in insertion, without a screwdriver. (*1)
To remove, a flat-blade screwdriver is inserted in a simple two-action process.
Since wiring can be performed regardless of operators' skill level, wiring time is reduced.
*1) When connecting stranded wire, insert the wire while holding down the pusher with a flat-blade screwdriver.
Connecting

Push the wire straight in as far as it will go.

Connection is completed. Pull lightly to make sure it is firmly in place.

Removing

Hold down the pusher with a flat-blade screwdriver.

Pusher

While holding down the pusher, pull out the wire. Release the flat-blade screwdriver.

Time saving and efficient

Push-in connections are made simple by inserting the wire, reducing wiring time by approximately 55% compared to conventional screw terminals.

[Conditions]
Push-in: Insert wire with ferrule.
Screw terminals: With screw loosened, insert wire, then tighten with electric driver.

Approx.**55%** reduced (*2)

Push-in HW Series

Conventional screw terminals
*2) As of IDEC research (as of January 2020)

Reliable and easy

Finger-safe structure and vibration resistance. What's more, the space-saving design means better workability in a smaller space.

Stays firmly in place
Since the ferrule is held in place by a spring load, the wiring remains taut and vibration resistance is improved.

Finger-safe structure
IP20 Finger-safe protection enables wiring to be performed without direct contact between screwdriver and conductive part.

Pusher
Smart   Simple

Wiring procedure comparison

Work can be performed without using tools and regardless of operators' skill level.

*1) When ferrule is used.

Conventional screw terminal

| Remove screw | Pass wire through crimping terminal | Tighten screw | Check |

Push-in terminal (*1)

| Insert wire | Simple one-step operation | Pull lightly to confirm |
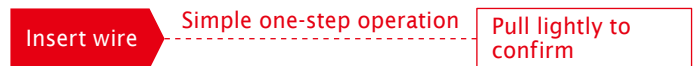

Smart

No additional tightening needed

Because screws are not used on push-in terminals, re-tightening of screws is not required.

Product Upgrade

The superior functions of the conventional CW Series still remain while improving ease of use.

Contact block depth reduced `Smart`

Saves space inside panel and enables downsizing of equipment.

Pushbuttons

Single contact block

Panel depth

36.4mm

`NEW`
Double contact block

Panel depth

59.6mm

Angled Connections `Smart`

Angled connections make wiring easy even when switches are mounted on a panel.
Also, 24-degree inclination faced to the panel improves the fit of the wires, and contributes to downsizing of the panel and equipment.

24°
`NEW`

4-contact configuration available with double contact blocks

Double contact blocks

Single contact blocks

Double contact blocks available for all models including pushbuttons, illuminated pushbuttons, selector switches, and key selector switches.

Added Value

Our aim is to create products that enable customers to experience the utmost usability.

Test point

A test point is available to check connectivity of the wiring.
Check the connectivity easily using a tester.

Test point
Sub-Assembled Units

Sub-assembled units can be ordered for flexible use, such as sudden changes in design.

Flush Silhouette Switches

• Specify a bezel color in place of ① in the part no.

Color Code	Bezel Color
1	Black
4	Metallic

• Specify an illumination color code in place of ⑥ in the Part No.
  R (red), G (green), Y (yellow), A (amber), S (blue), PW (pure white)
• The assembled part no. above is when the operating voltage is 24V AC/DC.

• Specify an operating voltage code in place of ⑤ in the part no. Select from the table below.

| Operating voltage code	Operating voltage
Q2	6V AC/DC
Q3	12V AC/DC
Q4	24V AC/DC

Part No. (Ordering No.)/ mounting positions of contact units: page 31.

## Illuminated Pushbuttons (Round Flush / Round Extended) Dimensions

All dimensions in mm
Round Flush

1 to 2-contacts

3 to 4-contacts

Round Extended

1 to 2-contacts

3 to 4-contacts

• See page 9 for mounting hole layout.

Pilot Lights (Round Flush / Round Extended)

Assembled

Package Quantity: 1

Operator Style		Bezel Color	Rated Operating Voltage	Part No. (Ordering No.)	④ Illumination Color Code
Round Flush Black bezel / Metallic bezel		Black	12V AC/DC	CW1P-1PQ3④	R (red) G (green) Y (yellow) A (amber) S (blue) PW (pure white)
			24V AC/DC	CW1P-1PQ4④	
		Metallic	12V AC/DC	CW4P-1PQ3④	
			24V AC/DC	CW4P-1PQ4④	
Round Extended Black bezel / Metallic bezel		Black	12V AC/DC	CW1P-2PQ3④	R (red) G (green) Y (yellow) A (amber) S (blue) PW (pure white)
			24V AC/DC	CW1P-2PQ4④	
		Metallic	12V AC/DC	CW4P-2PQ3④	
			24V AC/DC	CW4P-2PQ4④	

• Specify an illumination color code in place of ④ in the part no.
• Pilot lights are built-in with an LED unit. For maintenance LED units, see page 32.
• Pilot lights contain 2 dummy blocks.
• Printed film can be inserted. For size details, see page 36.

  • For other specifications, select from sub-assembled units (P17).

Part No. Example

Assembled and sub-assembled unit
Assembled Part No. Example

⚠ Safety Precautions

- Turn off the power to the CW series switches & pilot lights before starting installation, removal, wiring, maintenance, and inspection of the products. Failure to turn power off may cause electrical shocks or fire hazard.
- For wiring, use wires of a proper size to meet the voltage and current requirements. and the number of connectable wires (page 39).

Failure to tighten the terminal screws may cause overheating and fire.
- Avoid using in places mentioned below to maintain performance of the product.
  -Exposed to direct sunlight
  -Subject to corrosive or flammable gases

Instructions

Notes for Operation

- When using the CW series control units in a safety-related circuit of a control system, observe safety rules and regulations of each country concerning particular applications of the actual machines and facilities. Perform risk assessment before operation to ensure safety.

Operating Conditions

- In corrosive gas or high-temperature, high-humidity atmosphere, contact failure due to corrosion or color change or breakage of the housing may occur.
- Main parts of the CW series control units are made of plastic. Do not scratch the surface with a sharp object or apply excessive shocks or load, otherwise the control units may be damaged.
- In particular, keep the button, lens, and bezel from such damage, otherwise appearance and function may be impaired.
- Do not apply detergents, cutting oils, or chemicals which may impair the function and appearance of the CW series control units.
Installing the Contact Unit

1. Remove the contact block from the operator.
2. Remove the locking ring from the operator.
3. With the TOP marking of the operator facing upwards, align the anti-rotation projection on the operator with the recess in the mounting hole, insert the operator into the mounting hole. [TOP] When installing the nameplate, insert between the operator and the panel.
4. Tighten the locking ring from the rear of the panel.

### Pushbuttons and Illuminated Pushbuttons

Panel
[TOP] marking
Locking Ring
Gasket
Selector and Key Selector Switches

[TOP] marking

Removing and Installing the Contact Unit

1. To remove the contact block from the operator, push the yellow locking lever and turn it to the left.
2. To install, align the TOP marking on the operator with the TOP marking on the contact block mounting adaptor, and turn the locking lever to the right.

2. Turn left

1. Push
Notes for Panel Mounting

Locking ring wrench recommended torque
Tighten the bezel to a tightening torque of 1.2 N·m

Locking ring wrench
Locking ring wrench (MW9Z-T1) can be used to tighten the bezel.
Do not use pliers. Excessive tightening will damage the locking ring.

Locking ring wrench
(MW9Z-T1)

Mounting Hole

1. Mounting hole dimensions are in compliance with IEC 60947-5-1.
2. If the anti-rotation projection is removed from the bezel, CW series control units can be mounted in ø22.3 mm mounting holes.
   To remove the anti-rotation projection, remove the gasket and use cutting pliers to break the projection.
   Also, make sure not to damages other parts of the operator.

Instructions

Removing and Installing Contact Blocks, Dummy Blocks and LED Unit

Removing

To remove the contact block, dummy block, and LED unit from the operator, insert a flat screwdriver under the latch and push down the screwdriver as shown below.

Installing

When installing the contact block or dummy block, make sure that it snaps on to the operator.

Note 1) Make sure to attach a correctly assembled connection unit to the operator.

Note 2) When attaching the contact block to the connection unit, make sure that the connection is detached from the operator.
If a contact block is installed with the operator attached to the connection unit, malfunction of the switch may occur.

Operator
Connection unit
Test Point

Note) Do not insert wires to the test points.

Single contact block

Note) When conducting a continuity test, make sure that the probes (ø2.0 maximum) of the tester are inserted vertically to the panel.

Single contact block

Test point
Double contact block

When conducting a continuity test on the first deck, make sure that probes (ø2.0 maximum) of the tester are inserted in an angle of the contact block, in two places as shown below.
When conducting a continuity test on the second deck, make sure that probes (ø2.0 maximum) of the tester are inserted vertically to the panel.

(1) First deck test point
(2) Second deck test point

Instructions

### Removing and Installing Lens and Buttons

Pushbuttons (momentary)

Momentary pushbutton caps cannot be removed.
Do not tamper with the pushbutton caps using a screwdriver or pliers, otherwise the pushbutton caps may be damaged.

Pushbuttons (maintained) / Illuminated Pushbuttons / Pilot Lights

To remove the button or lens from a pushbutton, illuminated pushbutton or pilot light, insert a flat screwdriver under the flange of the lens at 90° from the TOP marking and twist the screwdriver.
Note) Insert the flat screwdriver by about an angle of 30°. Do not insert the screwdriver too deeply and do not apply excessive force to the lens, otherwise the bezel surface may be damaged.

Instructions

Installing the Rubber Boot

When using in places where the switches are subjected to water splash or an excessive amount of dust, make sure to use the optional rubber boot.

1. Remove the gasket from the operator, and mount the rubber boot to cover the bezel as shown in the below diagram (Do not use a washer).
2. Fit the rubber boot to the bezel of the operator as shown in the diagram of the completed operator below.

Notes

- Attach the rubber boot by making sure that the front round part (A) of the rubber boot is concentric with the lens and button.
  Otherwise the appearance may look different.
- Make sure that the rubber boot is properly fitted, otherwise, the waterproof and dustproof characteristics are not ensured.
Note: Install the rubber boot before mounting the unit to the panel.

Key Selector Switches

To prevent malfunctions and damage, take the following precautions.
- Insert the key to the bottom before turning.
- Do not remove the key while turning.
- Besides the standard key (0H), six other keys are available.
  Use a key with a key that matches with the number on the key cylinder. However, for standard keys, the key number is engraved on the key but not on the key cylinder.
- Keys are available in two shapes.
  Key numbers 0H (standard), 1H, and 2H are reversible keys.
  Key numbers 3H, 4H, 5H, and 6H are non-reversible keys. Make sure of correct insertion direction.

Maintained Switches

Do not replace the button/lens while the operator is latched. Otherwise the internal structure will be damaged.

Selector Switches

Turn the selector operator or key securely to each position.

Applicable Wire

When wiring, use the applicable wires shown below.

Applicable Wire and Specifications

Applicable Wire (*1)	0.25 to 1.5mm^2 (AWG16 to 24)
Wire Strip Length (*2)	8 ± 1mm (*3)

*1) For applicable wires confirmed by IDEC, see website.
*2) For details on ferrules, see "Wire Size and Recommended Ferrules" table below.
*3) Strip the sheath of the wire 8±1mm from the end.

Note: Make sure that the stranded wires do not loosen when using wiring without ferrules.

Wire Size and Recommended Ferrules

Ferrules without insulated covers

Applicable Wire (Stranded Wire)		Wire Strip Length	Weidmüller Recommended Part No.
AWG	mm^2		
24	0.25	5 to 6mm	H0.25/5
20	0.50	10 to 11mm	H0.5/10
18	0.75	10 to 11mm	H0.75/10
18	1.00	10 to 11mm	H1.0/10
16	1.50	10 to 11mm	H1.5/10

Note) Above ferrules cannot be purchased from IDEC.

Ferrules with insulated covers

Applicable Wire (Stranded Wire)		Wire Strip Length	IDEC Part No.
AWG	mm^2		
24	0.25	10 to 11mm	S3TL-H025-12WJ
22	0.34	10 to 11mm	S3TL-H034-12WT
20	0.50	10 to 11mm	S3TL-H05-14WA
18	0.75	10 to 11mm	S3TL-H075-14WW
18	1.00	10 to 11mm	S3TL-H10-14WY
16	1.50	10 to 11mm	S3TL-H15-14WR

Recommended Crimping Tool (Optional)

| Item	Weidmüller Recommended Part No.
Crimping tool	PZ 6 Roto L

Note 1) Note the crimping dimensions when using tools other than the recommended crimping tool. For details, see page 38.
Note 2) The above crimping tool cannot be purchased from IDEC.

Recommended Screwdriver (Optional)

Item	IDEC Part No.
Flat blade screwdriver	S3TL-D04-20-60
	S3TL-D04-25-75

Note) Use a flat blade screwdriver with a blade size of 0.4×2.5 mm.
## Instructions

Wiring Procedure

Connecting the wire

1) Stranded wires with ferrules or solid wire
① Insert the wire to the back of the wire port.
② After wiring, tug lightly to make sure that the wire is properly connected.

2) Stranded wire
① While pressing the pusher using a flat blade screwdriver (recommended optional screwdriver: S3TL-D04-20-60 or S3TL-D04-25-75), insert the wire fully in the wiring port. Wire is connected when the pusher is released.
② After wiring, tug lightly to make sure that the wire is properly connected.

Flat blade screwdriver

Pusher
Crimping of Ferrules and Wiring

• Choose an appropriate ferrule for the wire.
• Cut the wire carefully to get a flat end.
• Make sure that ferrule sleeve is completely filled by the conductor. Depending on the cross section, the conductor should protrude approx. 0 to 1 mm from the ferrule sleeve.

0〜1mm
• When crimping, refer to the instructions of the crimping tool.

Faults which can occur during crimping:
• Cracks along the sides and die impressions
• Splitting of the ferrules
• Asymmetrical crimping shape
• Extreme burrs formed along the sides
• Ferrule not filled by conductor
• Single conductors pushed back by protruding from the insulated cover
• Single conductors squeezed off
• Insulated cover damaged by the crimping jaw
• Conductor insulation not pushed into the insulated cover
• Ferrule bent longitudinally after crimping

Formation of cracks at the sides. Slides split open

Formation of cracks at the impressions of the crimping jaw

Asymmetrical crimping shape. Burr formation on one side

Asymmetrical crimping shape. Burr formation on one side

Single conductor squeezed off
Single conductor pushed back

Instructions

Crimping dimensions: W2.4×H1.9 mm

Maximum connectable crimping size is W2.4×H1.9. Make sure that the ferrule size will be smaller than this dimension.

(Recommended crimping tool: PZ 6 Roto (optional) Weidmüller)

Max. 1.9mm

Max. 2.4mm

Note 1) If a tool other than the recommended crimping tool is used, the ferrule may not be crimped to the appropriate size and the clamp or spring inside the contact block may be deformed and may not operate normally.

Note 2) Pin crimp terminals cannot be used.

Removing the Wire

When removing the wire, push the pusher using a flat blade screwdriver (recommended optional screwdriver: S3TL-D04-20-60, see page 33) and pull wire out in the direction of the arrow.

Flat blade screwdriver

Pusher

<Notes>
• Operate the pusher with a force of 20N. Do not press excessively. Otherwise, the switch may be damaged.

• Do not pull the wire out without depressing the pusher. When pulling the wire, be sure to pull in a straight direction. Otherwise, the socket may be damaged.

Number of Connectable Wires

Unit	Connectable wires		No. of connectable wires
HW-P Contact block LED unit	Solid wire	0.25 to 1.5mm^2 (AWG16 to 24)	2
	Stranded wire	0.25 to 1.5mm^2 (AWG16 to 24)	
	Ferrule	Without insulated cover 0.25mm^2 :conductor length 5 to 10mm 0.5 to 1.0mm^2 :conductor length 6 to 10mm 1.5mm^2 :conductor length 8 to 10mm With insulated cover 0.25 to1.0mm^2 :conductor length 6 to 10mm 1.5mm^2 :conductor length 8 to 10mm Note) Pin terminals cannot be used	

Note) Only one wire can be inserted into one wire port.

Ordering Terms and Conditions

Thank you for using IDEC Products.

By purchasing products listed in our catalogs, datasheets, and the like (hereinafter referred to as "Catalogs") you agree to be bound by these terms and conditions. Please read and agree to the terms and conditions before placing your order.

1. Notes on contents of Catalogs

(1) Rated values, performance values, and specification values of IDEC products listed in this Catalog are values acquired under respective conditions in independent testing, and do not guarantee values gained in combined conditions.
Also, durability varies depending on the usage environment and usage conditions.

(2) Reference data and reference values listed in Catalogs are for reference purposes only, and do not guarantee that the product will always operate appropriately in that range.

(3) The specifications / appearance and accessories of IDEC products listed in Catalogs are subject to change or termination of sales without notice, for improvement or other reasons.

(4) The content of Catalogs is subject to change without notice.

2. Note on applications

(1) If using IDEC products in combination with other products, confirm the applicable laws / regulations and standards.
Also, confirm that IDEC products are compatible with your systems, machines, devices, and the like by using under the actual conditions. IDEC shall bear no liability whatsoever regarding the compatibility with IDEC products.

(2) The usage examples and application examples listed in Catalogs are for reference purposes only. Therefore, when introducing a product, confirm the performance and safety of the instruments, devices, and the like before use. Furthermore, regarding these examples, IDEC does not grant license to use IDEC products to you, and IDEC offers no warranties regarding the ownership of intellectual property rights or non-infringement upon the intellectual property rights of third parties.

(3) When using IDEC products, be cautious when implementing the following.
   i. Use of IDEC products with sufficient allowance for rating and performance
   ii. Safety design, including redundant design and malfunction prevention design that prevents other danger and damage even in the event that an IDEC product fails
   iii. Wiring and installation that ensures the IDEC product used in your system, machine, device, or the like can perform and function according to its specifications

(4) Continuing to use an IDEC product even after the performance has deteriorated can result in abnormal heat, smoke, fires, and the like due to insulation deterioration or the like. Perform periodic maintenance for IDEC products and the systems, machines, devices, and the like in which they are used.

(5) IDEC products are developed and manufactured as general-purpose products for general industrial products. They are not intended for use in the following applications, and in the event that you use an IDEC product for these applications, unless otherwise agreed upon between you and IDEC, IDEC shall provide no guarantees whatsoever regarding IDEC products.
   i. Use in applications that require a high degree of safety, including nuclear power control equipment, transportation equipment (railroads / airplanes / ships / vehicles / vehicle instruments, etc.), equipment for use in outer space, elevating equipment, medical instruments, safety devices, or any other equipment, instruments, or the like that could endanger life or human health
   ii. Use in applications that require a high degree of reliability, such as provision systems for gas / waterworks / electricity, etc., systems that operate continuously for 24 hours, and settlement systems
   iii. Use in applications where the product may be handled or used deviating from the specifications or conditions / environment listed in the Catalogs, such as equipment used outdoors or applications in environments subject to chemical pollution or electromagnetic interference
   If you would like to use IDEC products in the above applications, be sure to consult with an IDEC sales representative.

3. Inspections

We ask that you implement inspections for IDEC products you purchase without delay, as well as thoroughly keep in mind management/maintenance regarding handling of the product before and during the inspection.

4. Warranty

(1) Warranty period
The warranty period for IDEC products shall be one (1) year after purchase or delivery to the specified location. However, this shall not apply in cases where there is a different specification in the Catalogs or there is another agreement in place between you and IDEC.

(2) Warranty scope
Should a failure occur in an IDEC product during the above warranty period for reasons attributable to IDEC, then IDEC shall replace or repair that product, free of charge, at the purchase location / delivery location of the product, or an IDEC service base. However, failures caused by the following reasons shall be deemed outside the scope of this warranty.
   i. The product was handled or used deviating from the conditions / environment listed in the Catalogs
   ii. The failure was caused by reasons other than an IDEC product
   iii. Modification or repair was performed by a party other than IDEC
   iv. The failure was caused by a software program of a party other than IDEC
   v. The product was used outside of its original purpose
   vi. Replacement of maintenance parts, installation of accessories, or the like was not performed properly in accordance with the user's manual and Catalogs
   vii. The failure could not have been predicted with the scientific and technical standards at the time when the product was shipped from IDEC.
   viii. The failure was due to other causes not attributable to IDEC (including cases of force majeure such as natural disasters and other disasters)
Furthermore, the warranty described here refers to a warranty on the IDEC product as a unit, and damages induced by the failure of an IDEC product are excluded from this warranty.

5. Limitation of liability

The warranty listed in this Agreement is the full and complete warranty for IDEC products, and IDEC shall bear no liability whatsoever regarding special damages, indirect damages, incidental damages, or passive damages that occurred due to an IDEC product.

6. Service scope

The prices of IDEC products do not include the cost of services, such as dispatching technicians. Therefore, separate fees are required in the following cases.

(1) Instructions for installation / adjustment and accompaniment at test operation (including creating application software and testing operation, etc.)

(2) Maintenance inspections, adjustments, and repairs

(3) Technical instructions and technical training

(4) Product tests or inspections specified by you

The above content assumes transactions and usage within your region. Please consult with an IDEC sales representative regarding transactions and usage outside of your region. Also, IDEC provides no guarantees whatsoever regarding IDEC products sold outside your region.
